

REMARKS

Claims 1, 2, 4-6 and 8-10 were rejected under 35 USC §102(e) as being anticipated by Batchelder (US 6019165); however, Batchelder fails to identify each and every element set forth and arranged as in the amended Claim 1.

Claim 1 has been amended to add the following limitation:

“...a pump coupled to an edge of said base ...” (See Amended Claim 1 Line 10.)

Batchelder in Fig. 5, 6, 7 and 8 disclose a pump centrally coupled to the heat sink.

Therefore, since Batchelder does not contain all the claim limitations, the Applicant respectfully submits that the rejection has been overcome and the rejection of Claim 1 based on Batchelder is unsupported and should be withdrawn.

For the above reason, Applicant respectfully submits that the 35 USC §102 (e) rejection has been successfully traversed and that the rejection is improper and should be withdrawn. Applicant respectfully requests that Claims 1, 2, 4-6 and 8-10 be allowed.

No additional fee is due.

On the basis of the above remarks, early consideration of this application and early allowance are respectfully requested.

Respectfully submitted,
Sierra Patent Group, Ltd.

As Amended

IN THE CLAIMS

1. (Once Amended) A device for the transfer of heat away from a heat source comprising:
 - a base having first and second surfaces;
 - a plurality of fins extending from said second surface of said base;
 - said base further including a chamber disposed between said first surface and said second surface;
 - said chamber further including a divider disposed within said chamber and adjacent said first surface;
 - a pump coupled to an edge of said base; and
 - a [cooling] cooling fluid disposed within said chamber.
